

NIVEL 1 EJERCICIO 1

Nuestra base de datos TRANSACTIONS consta de dos tablas Company y Transaction. Aquí podemos ver las columnas de la tabla de Company:

```
CREATE TABLE IF NOT EXISTS company (  
  id VARCHAR(15) PRIMARY KEY,  
  company_name VARCHAR(255),  
  phone VARCHAR(15),  
  email VARCHAR(100),  
  country VARCHAR(100),  
  website VARCHAR(255)  
);
```

La tabla Company tiene 6 columnas y su PK es la columna "id" que a la vez se relaciona con la segunda tabla Transaction a través de su columna "company_id" que es FK. La relación es de uno a muchos. Cada empresa solo tiene un id en la tabla de Company, pero su id puede salir muchas veces en la tabla de transacciones. Su Primary Key es la columna "id" (de las transacciones). Esta tabla tiene 8 columnas y 100 registros.

```
SELECT *  
FROM transactions.company;
```
